

# Astronomy:

1. Telescopes: Learn about the types of telescopes and the principles behind lenses and magnification.
2. Stargazing: Learn to use a telescope to identify heavenly bodies. What can we learn about astronomy in the Bible and what constellations are named there?
3. Starlight: Discover how spectrophotometry helps us understand how light travels through space.
4. Meteorites: Handle a real falling star! What are meteorites, and what impact do they have on the earth? Are they mentioned in the Bible?
